No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note= "Region coding for 5'part of alternative protein"
The invention describes an isolated human FOXC2 promoter region. The mammalian FOXC2 promoter region for the medulation of FOXC2 polypeptide expression has therapeutic value in treating type II diabetes mellitus, obesity, hypercholesterolaemia, other cardiovascular diseases or dyslipidaemias. This sequence encodes the mouse mesenchyme forkhead if (MHF-1) protein (also called FOXC2 transcription factor), described in the method of the invention
                                                                                                                  Gaps

The mammalian FOXC2 promoter region for the modulation of FOXC2 polypeptide expression has therapeutic value in treating type II diabetes mellitus, obesity, hypercholesterolaemia, other cardiovascular diseases or dyslipidaemias. This sequence encodes the human transcription factor FOXC2, the promoter of which is described in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                promoter region that modulates the expression of a is useful for treating obesity and type II diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The invention relates to an isolated polymucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also concluded is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polymucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (BST) for inforensics, in assessing biodiversities, or in identifying mutations in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, or chromosome and gene mapping, in the recombinant production of protein, or in generating antibodies specific for it. The present sequence is useful for generating antibodies specific for it. The present sequence is useful for generating antibodies specific for it. The present sequence is useful as a down/EST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly and printed specification, but was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polymucleotide sequences obtained from various cDNA libraries, useful as hybridization probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA.
                                                                                                                                                                                                                                                                 Human, ss, sequencing by hybridisation, SBH, expressed sequence tag; genome mapping, biodiversity, genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Jones LW
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Length 455;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a method (MI) for identifying genes involved in plant resistance or response to pathogenic infection. MI comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (MI) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to illustrate the invention.

The present sequence encodes a human transmembrane protein. The specification describes transmembrane proteins designated KIAA0880, 65h2 and 593. The proteins and polymucleotides can be used for screening assays, detection assays, e.g. chromosome mapping, tissue typing, forensic biology and predictive medicine, e.g. diagnostic assays, prognostic assays, monitoring clinical trials and pharmacogenomics. They polymucleotides can also be used for the recombinant production of 65h2 and 533 proteins, which can be used in assays to detect compounds which modulate their activity. These compounds are useful in the treatment of diseases characterized by aberrant activity or expression of protein which catalyse or facilitate transport of charged organic compound, e.g. prostaglandins and thromboxanes
                                                                                                                                                                                                     Human, transmembrane protein, 65h2 protein, 593 protein, prostaglandin,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New nucleic acid molecules encoding transmembrane proteins designated 65h2 and 293 are useful for screening assays, detection assays and in
                                                                                                                                                    Nucleotide sequence of a human transmembrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; Page 181-194; 215pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated polynucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50811, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The mucleic acid sequences are useful in diagnostics as expressed sequence tags (EST) for information expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations in forensics, in assessing biodiversities, or in identifying mutations in forences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of corticular for generating antisense DNA or RNA. The present sequence is useful for generating antiscase specific for it. The present sequence is one of the 38043 isolated CDNA/EST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence. Huml?DocID=20030073623
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New polynucleotide sequences obtained from various cDNA libraries, useful as hybridization probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA.
                                                                                                                                                                                                                                                                                                             Human; ss; sequencing by hybridisation; SBH; expressed sequence tag; BST; genome mapping; biodiversity; genetic disorder.

The present sequence encodes a human transmembrane proteins designated 65h2. The specification also describes a transmembrane protein designated 593 and KIAA0880. The proteins and polynucleotides can be used for screening assays, detection assays, e.g. chromosome mapping, tissue typing, forensic biology and predictive medicine, e.g. diagnostic assays, prognostic assays, monitoring clinical trials and pharmacogenomics. They polynucleotides can also be used for the recombinant production of 65h2 and 593 proteins, which can be used in assays to detect compounds which diseases their activity. These compounds are useful in the treatment of diseases characterized by aberman activity or expression of protein which catalyse or facilitate transport of charged organic compound, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Rice endosperm expression sequence label and genechip prepared from it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Rice; endosperm expression sequence label; gene chip; babel technique;
                                                                                                                                                                                                     New nucleic acid molecules encoding transmembrane proteins designated 65h2 and 293 are useful for screening assays, detection assays and in predictive medicine.

                                         The invention describes a novel rice endosperm expression sequence label and the gene chip formed from it. The expression sequence babel technique is used to create a rice endosperm cDNA library. Non-redundant expression sequence labels are then combined and used to create a gene chip by microarray techniques. This sequence represents a rice endosperm expression sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense encoding a polypeptide whose expression is inhibited by the antisense polypeptide or its fragment whose expression is inhibited by the antisense antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting callular proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated nucleic acid comprising any one of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating call signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.

                                                            q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a nucleic acid array, where each coordinate contains a single nucleic acid species having one of 770 nucleotide sequences (appearing as ABS/6747-ABS/7516) a of a Xenopus embryonic gene product, or its complement or hybridisable fragment of not less than 20 contiguous nucleotides of one of those sequences. Also included are detecting differential expression of embryonic genes, comprising: (a) contacting a nucleic acid array comprising genes expressed in embryonic but not mature cells with nucleic acids from sample and control cells; and (b) detecting differential hybridisation of nucleic acids from the sample cells relative to the control cells; and detecting defects in development, comprising: (a) concacting nucleic acids from test cells undergoing development with a nucleic acid array of gene products known to play a fundamental role in the development process; and (b) detecting a difference in expression of a fundamental gene in the sample cells relative to a standard. The invention is useful to identify genes in why to a meritation. This would be useful for diagnosing developmental differentiation. This would be useful for diagnosing developmental cells. The disorders and for identifying different types of embryonic cells. The

AANSA951 to AANS4702 encode the human immune/haematopoietic antigen (I)

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic

activity, and can be used in gene therapy and vaccine production. (I)

cytoteins and polynuclectides may be used in the prevention, diagnosis and

cxample, they may be used to treat disorders associated with decreased

example, they may be used to treat disorders associated with decreased

cxample, they may be used to treat disorders associated with decreased

cxample the activity of (I) by expressing inactive proteins or to

that affect the activity of (I) by expressing inactive proteins or to

cyphynuclectides may be used to product of (I). Additionally, by inserting the

cyphynuclectides may be used to produce the secreted (I), by inserting the

cyphynuclectides may be used to produce the secreted (I), by inserting the

cyphynuclectides may be used to produce the secreted (I), by inserting the

cyctein. (I) proteins and polynucleotides may be used to prevent,

ciagnose and treat immune/haematopoietic-related diseases, especially

cancers and cancer metastases of haematopoietic antigen genomic

to AANS964 represent tuman immune/haematopoietic antigen genomic

sequences from the present invention. AAANS4921 to AAXS4950 and AAM82169

crepresent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; SEQ ID NO 30694; 3071pp + Sequence Listing; English.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 1

                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 3, Application US/09801876B

Patent No. 6492155

GENERAL INFORMATION:
TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC

TITLE OF INVENTION: TACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES
TITLE OF INVENTION: THEREOF ENCODING HUMAN KINASE PROTEINS, AND USES
TITLE REFERENCE: CL001160

CURRENT APPLICATION NUMBER: US/09/801,876B

CURRENT PILLING DATE: 2001-03-09

NUMBER OF SEQ ID NOS: 8

SOFTWARE: FactSeQ for Windows Version 4.0

SEQ ID NO 3

US-09-198-452A-1
Sequence 1, Application US/09198452A
Patent No. 6559294
GENERAL INFORMATION:
APPLICANT: GTIffais, R.
TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments
TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, prevering Prints of INVENTION: and treatment of infection
TITLE REFERENCE: 9710-003-999
CURRENT APPLICATION NUMBER: US/09/198,452A
CURRENT FILING DATE: 1998-11-24
NUMBER OF SEQ ID NOS: 6849
SEQ ID NO 1
LENGTH: 1230025
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NAME/KEY: misc feature
